

PARACHUTE EXPERIMENT:

After making your mini parachute, use this table to log your results. Launch your parachute three different times and get the average time of all three launches.

LAUNCHES	TIME:
#1	
#2	
#3	
Average (of launches 1-3)	

After doing so, change one variable of your parachute. For example, you can change the length of your string. Go ahead and launch it three more times.

LAUNCHES	TIME:
#1	
#2	
#3	
Average (of launches 1-3)	

REFLECT ON YOUR RESULTS:

What did you change?

How did this affect your launches?

Why do you think that is?
